Energy performance certificate (EPC)

| Tomas 1 27 Princess Street BLACKPOOL FY1 5EQ | Energy rating |
|-------------------------------------------------------|--------------------------|
| Valid until | Certificate number |
| 31 January 2026 | 9469-2819-6925-9305-8715 |

Property type

end-terrace house

Total floor area

178 square metres

Rules on letting this property

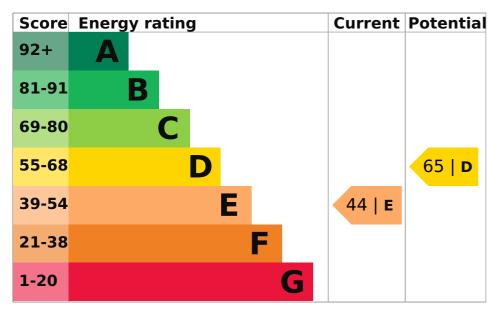

Properties can be rented if they have an energy rating from A to E.

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read <u>guidance for landlords on the regulations and</u> <u>exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance)</u>.

Energy efficiency rating for this property

This property's current energy rating is E. It has the potential to be D.

See how to improve this property's energy performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

very good (most efficient)

- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

| Feature | Description | Rating |
|----------------------|------------------------------------------------|-----------|
| Wall | Cavity wall, as built, no insulation (assumed) | Poor |
| Roof | Pitched, no insulation (assumed) | Very poor |
| Roof | Roof room(s), no insulation (assumed) | Very poor |
| Window | Mostly double glazing | Average |
| Main heating | Boiler and radiators, mains gas | Good |
| Main heating control | Programmer, no room thermostat | Very poor |
| Hot water | From main system | Good |
| Lighting | No low energy lighting | Very poor |
| Floor | Suspended, no insulation (assumed) | N/A |
| Floor | Solid, no insulation (assumed) | N/A |
| Secondary heating | None | N/A |

Primary energy use

The primary energy use for this property per year is 377 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

An average household produces 6 tonnes of CO2 This property produces 12.0 tonnes of CO2

This property's potential production

By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 4.3 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

7.7 tonnes of CO2

How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from E (44) to D (65).

Potential

energy rating

What is an energy rating?

| What is an energy rating? | energy rating |
|-------------------------------------------------------------|-----------------|
| Recommendation 1: Cavity wall insulation | |
| Cavity wall insulation | |
| Typical installation cost | |
| | £500 - £1,500 |
| Typical yearly saving | £264 |
| Potential rating after carrying out recommendation 1 | |
| | 50 E |
| Recommendation 2: Low energy lighting | |
| Low energy lighting | |
| Typical installation cost | £75 |
| Typical yearly saving | £73 |
| Potential rating after carrying out recommendations 1 and 2 | |
| | 52 E |
| Recommendation 3: Heating controls (room thermostat an | d TRVs) |
| Heating controls (room thermostat and TRVs) | |
| Typical installation cost | £350 - £450 |
| Typical yearly saving | |
| | £320 |
| Potential rating after carrying out recommendations 1 to 3 | |
| | 59 D |
| Recommendation 4: Solar photovoltaic panels, 2.5 kWp | |
| Solar photovoltaic panels | |
| Typical installation cost | £5,000 - £8,000 |
| Typical yearly saving | |
| | £273 |

£2493

£656

Paying for energy improvements

Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)

Estimated energy use and potential savings

Estimated yearly energy cost for this property

Potential saving

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The estimated saving is based on making all of the recommendations in how to improve this property's energy performance.

For advice on how to reduce your energy bills visit Simple Energy Advice (https://www.simpleenergyadvice.org.uk/).

Heating use in this property

Heating a property usually makes up the majority of energy costs.

Estimated energy used to heat this property

Space heating

39857 kWh per year

Water heating

2335 kWh per year

Potential energy savings by installing insulation Type of insulation Amount of energy saved Loft insulation 3088 kWh per year Cavity wall insulation 5385 kWh per year You might be able to receive Benewable Heat Incentive payments (https://www.gov.uk/domestic-repewable-beat-incentive). This will belp to reduce carbon

You might be able to receive <u>Renewable Heat Incentive payments (https://www.gov.uk/domestic-renewable-heat-incentive</u>). This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments.

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
